PERSONAL PROFILE

I am a former Petty Officer Second Class in the United States Navy and a former business, logistics, college student who realized my creative side would be best filled as a software developer. My passion for learning and creating more efficient ways of production is better attained through development. I love creating a beautiful full-stack project that pushes me to create a seamless, organic way to help users interact with a webpage, on the front-end, while also challenging myself to create an efficient back-end. Coding has changed all aspects of my life, from pushing myself to higher expectations to learning from my mistakes and grow from them.

PROJECTS

TABLE & WRIST

I built a responsive CRUD web application and I utilized REACT to help manage a watch collection

Table & Wrist allows user to manage their physical watch collection on a single webpage and view other users watch collections. I used CLOUDINARY as an api for handling image upload and SEMANTIC UI for styling. The server for this application is a JSON data-structure.

BANGAZON

I worked on a team and was responsible for building a responsive way for a user to save a product, sell a product, and check inventory

A team built, responsive CRUD e-commerce web application, PYTHON and DJANGO build, which allows users to register and create listings to sell products. A user, also, has the ability to purchase a listed product. The application uses BOOTSTRAP for styling.

KEEP IT LEAN

I built a PYTHON web application to help, a small business owner, keep track of products during manufacturing in a visualized representation of One Piece Flow.

Keep it Lean was designed and built by me to help a business owner keep track of products in a more efficient way. I utilized PYTHON and DJANGO to create a user friendly web application that follows the methodology of One Piece Flow. The user can visually see the product from start to finish, through the manufacturing process.
